PRIORITY

1. CV BUILDING
2. APTITUDE (TEST PREP) & SQL
3. IDENTIFY TARGET COMPANY
 - a. Ola (37), HiLabs (32), Flipkart (27), Cars24 (26), Meesho (26), Zomato - PA (21), City Mall - PA (20), Innovacer (20), Purple (18), Upswing Financial (17), NowPurchase (16), AuroEdu(15), Axis (15).
- 1.

TECHNICAL Q

Common Questions in Tech Interviews:

1. System Design and Architecture:

- a. Explain the architecture of a web-based application you've worked on.
- b. What is microservices architecture, and what are its benefits and drawbacks?
- c. Describe the components of a distributed system and the challenges in building one.
- d. How would you scale a system to handle increased traffic and load?

2. Software Development and Coding:

- a. Can you write code to implement a basic algorithm, such as binary search or quicksort?
- b. What is version control, and how do tools like Git work?
- c. Explain the difference between REST and GraphQL for API design.
- d. How do you handle software dependencies and ensure version compatibility?

3. Data and Databases:

- a. Discuss different types of databases (e.g., relational, NoSQL) and their use cases.
- b. Explain the concept of indexing in databases and why it's important.
- c. How would you design a database schema for a complex application?

4. Security and Privacy:

- a. What are common security threats in web applications, and how can they be mitigated?
- b. Describe the principles of secure coding and data encryption.
- c. How would you handle a data breach or security incident in a product you manage?

5. Cloud Computing and Infrastructure:

- a. What are the key services offered by major cloud providers like AWS, Azure, and Google Cloud?
- b. How would you deploy and manage a highly available application in the cloud?
- c. Discuss the benefits and challenges of serverless computing.

6. DevOps and Continuous Integration/Continuous Deployment (CI/CD):

- a. Explain the CI/CD pipeline and its importance in software development.

- b. How do you ensure a smooth deployment process with zero downtime?
- c. What is containerization, and how does it improve software deployment?

7. Performance Optimization:

- a. How do you identify and troubleshoot performance bottlenecks in a web application?
- b. Describe caching strategies and their impact on system performance.
- c. What is load balancing, and why is it important?

8. API Design and Documentation:

- a. What makes a well-designed API, and what are RESTful API best practices?
- b. How do you document APIs to ensure developers can use them effectively?

9. Big Data and Analytics:

- a. Explain the concept of “big data” and the tools used for processing and analyzing it.
- b. How can data analytics be used to inform product decisions?

HR - Q

1. Tell us something about yourself.
2. What do you feel has been your greatest achievement? Increasing BSE Trade Volume
What were the difficulties/obstacles you came across and how did you overcome them?
3. What do you think has been the most important decision you have made (work-related or personal) in your life so far? What were the major factors that you took into consideration and what have been its consequences? If you look back on it now, would you have done anything different?

KEEPING THE FOCUS ON PRODUCT MANAGEMENT

1. Please define your personal motivations that define your career aspirations. Why are these motivations important to you?
2. Mention three strengths and three weaknesses of yours. Illustrate each with an incident in your life. What have you done so far and how do you plan further to overcome the Weaknesses?
3. Mention an incident in your life where you convinced a group of people to do a task. How did you go about it and what were the problems and learning?

- ICC CASE

4. Detail an incident where you resolved a conflict.

Write your statement of purpose:

Foreign Company > 1%

Personals Questionnaire Level 2

Give 3 adjectives that best define you

- Creative, Collaborative, Responsible / Accountable

How would your friend describe you? (3 adjectives)

- Chill, Workaholic, Confident, Mature

How would your professor describe you? (3 adjectives)

- Detail Oriented, Good Communication, interactive

What do you propose to do in your career in the short and long term?

- **Short term:** 2 Years: I have through profiles of PMs of risa labs.. They have great experience and I think in fast paced environment, I would get to learn more,.
- **Long Term:** 10 Years: Solve for India, I don't know what, But I to contribute in the most meaningful way for our country

What was your biggest decision in life?

Focus on Product Management!!

What are your hobbies? What have you done to pursue your hobbies seriously?

Playing Cricket, there was a time I played cricket everyday consistently

What motivates you?

Identify one instance in life and describe the situation

1. Ethical dilemma

- senior's old report to save time.

2. Aggression / Determination

- Last year, when I applied for internships, I got a lead for PA for Paytm. I had that aggression that I have cracked this interview, what I did is exceptionally crazy; I had HR if I can get some sample data to

demonstrate my PA ability, and obviously they denied due to security reasons. My Goal was clear to create a personalized project for PAYTM, to show my ability; what I did next is created custom data set through chat gpt giving him 1000 words prompt, explaining the requirements, flow, constraints and boundary of data set and then I created a project.

3. Took risk which paid off

TARGETING PM ONLY

4. Took risk which did not pay off

NO, BECAUSE I TAKE UP THINGS POSITIVELY IN THE END.

5. Praise awarded

BSE INTERNSHIP

6. Rewarding college experience

NUKKAD DRAMATICS

7. You had trouble with people

DELHI PG SCAM

8. Persuaded team on an idea

ICC

9. Overcame resistance

JEE PREP

10. You made unreasonable request

PAYTM DATA

11. Frustration in dealing with the team

BSE - FORMULA'S - Tech

12. You used tact and diplomacy to get things done

- Resolving a Conflict Between Teammates in a College Project
- FRONTEND TEAM & UI TEAM

13. Bout of frustration

DELHI PG SCAM

14. Others criticised you

TRIP PLANNING, ROOM BOOKING

15. You put in efforts/ performance beyond requirements

PAYTM, DATA GENERATION

16. You faced a crisis situation

COVID

17. You solved a problem creatively

AARYA STAYS BOOK IDEA

18. You brought a new idea or a business goal to the table

AARYA STAYS WEBCHECKIN & AARYA STAYS BOOK IDEA

19. Inspired people/ team members/ colleagues

MY ROOMMATE

20. Achieved results against all odds

COMMUNICATION, CHALLENGE, COMPETITION

21. Highest point in life

JEE PREP & TIMES INTERNET INTERNSHIP

22. Compromised on values

One teammate contributed very little but wanted equal credit. value fairness.

24. Biggest failure. What went wrong and what would you have done differently?

NO, BUT STARTUP FAILED, END POSITIVE

BSE

GOAL: to promote the growth of the capital markets with robust financial infrastructure and stringent regulatory mechanisms.

I have worked on two projects on the Bombay Stock exchange. The first one would be the most impactful project of my career that was building the shareholding pattern identification model which lead to increase in trade volume of Bombay stock exchange and second project was more towards product management that was automating the sales deck generation for 101 BSE Indices, so out of these two projects where you want me to go deeper.

Situation: When I join Bombay stock exchange the process of identifying the shareholding pattern and eventually the free float market cap for each stock listed on BSE was done manually by a three member operations team which would take around 20 days per quarter and this process has to be done four times in a year, so that's around 80 days per year.

Task:

Action

Result

TIMES INTERNET

TIMES INTERNET

MISSION: Times Internet's mission is to inform, entertain, and enable the Indian consumer by building leading digital products in categories like news, entertainment, marketplaces, and transactions.

MODULES: AUTHORING, ADMIN, PAGE BUILDER, ANALYTICS, REPORT, CUSTOM FEED

WHY GOOGLE WANTS TO WHITE-LABEL DENMARK AND SELL IT TO OUTER WORLD, AS TIMES INTERNET HAVE A HUGE ACTIVE USER THROUGH ET, TOI APPS.. GOOGLE IS IN COLLABORATION WITH THEM FOR GETTING AD DATA BY IDENTIFYING WHAT USERS ARE CONSUMING WHAT TYPE OF CONTENT AND ULTIMATELY WHAT'S THEIR INTEREST, NOW, GOOGLE WANTS EVERY CONTENT CREATOR ORGANIZATION / SMALL CREATOR SHOULD BE POSTED THROUGH DENMARK... SO WHENEVER ANY CONTENT FROM ANY OF THESE CREATOR'S CONTENT IS CONSUMED, GOOGLE WILL GET MORE DATA OF CONSUMER BEHAVIOUR AND THEIR INTEREST FOR TARGETED ADVERTISING.

STAR

Situation -

When I joined Times Internet; Times was white labeling their Internal CMS - DENMARK used to manage content over ET, TOI... This project was funded Under Google > TIMES HAS HUGE DAUs > GET DATA OF CONTENT CONSUMPTION PATTERN > TIMES SELL THAT DATA TO GOOGLE > AS EVERY BUSINESS PREFERS G-ADS, & TIMES DONT HAVE ANY INDIRECT ADVERTISEMENT PLATFORM > WIN - WIN FOR BOTH > NOW GOOGLE WANTS DENMARK CMS TO **scale** GLOBALLY FROM SMALL CREATORS TO BIG COMPANIES / STARTUPS IN CONTENT CREATION SPACE > HENCE GET MORE DATA, MORE ACCURACY AND EVENTUALLY MORE PROFITS. This is my understanding of the **WHY behind their PRODUCT GOAL**.

Task - I owned, Creating the User Guide Documentation, and eventually while understanding the product features for documentation; I reported some features, critical gaps in the Denmark CMS. So First, I need you to understand the difference between a product that is being used internally by employees and a white labelled product which will be used by our potential customers. Here, as an INTERNAL Software, employees have to compromise on user experience or maybe they are habitual to adopting the CMS but when we take the product to the outside world.. Eliminating each friction is necessary for a global company like Times Group to provide the Best User Experience. So yes this was a broad existing gap in a CMS. That's my understanding of users and their expectations / behavior.

Action: I started with exploring the CMS and collecting feedback from editors on how their experience using Denmark, what suggestions they have, the major ones were already implemented; but for white labelling the smallest detail could matter a lot. Then going module wise, I understood the CMS; it was a huge CMS offering many many features over MODULES. Reported gaps & feature enhancement to the team, brainstormed with them and again come up with the second draft; then discussed on ROI, Feasibility and more importantly is this even needed for our solution. Then around 10 of the features were adopted; I implemented 4 of them by the end of the internship and parallelly working on user guide documentation where the documentation platform was created by me using the New No Code Web Page Builder which eventually saved tech team bandwidth and we made a great use of the existing resources. Created in a news form style.

Created Demo Videos with voiceover and Milestone Documentation to report GOOGLE.

Result:

DENMARK CMS was well tailored as a White Labelled product to launch into the Market

User Guide platform was created cutting ticket and demo time by **70% & saved nearly 3 weeks cost of dev/design team** by ideating the strategic use of web builder to build User Guide.

Learning.. Groomed everyday from my Mentor; Product Head Vision, CTO Vision, UI/UX Vision.. THE LEVEL I WAS SHAPED THERE; I still have TIMES DNA in me

FEATURES:

1. M – AUTO SAVE
2. M – USER GUIDE WEBSITE: BUILT USER GUIDE ON GOOGLE CMS INSTEAD OF DEV FROM THE TEAM
3. M – TUTORIAL VIDEOS FOR USERS AND GOOGLE
4. S – PAGE BUILDER – DRAG N DROP PAGE COMPONENTS (FROM GOOGLE)
5. S – SLIDESHOW AND WEBSTORY
6. C – BREADCUMB AND BREAKING NEWS TICKER
7. C – MOBILE DESKTOP WIREFRAME
8. C – FORM EMBED TO WEBSITE FROM DENMARK
9. W – Suggestions in user guide feedback
10. W – Dark / Light Mode
11. W – ARCADE INTEGRATION FOR INTERACTIVE DEMO

CRITICAL GAPS:

1. AUTO SAVE
2. IMG RENDERING ISSUE IN SVG & JPEG FORMAT
3. CONTENT RANKING – DRAG AND DROP
4. STICKY HEADER
5. BRAND COLOR PALLETE
6. MINOR USER FLOW OPTIMIZATIONS

ANALYTICS:

CONTENT COUNT, PAGEVIEWS, COMMENTS, ENTITY BREAKUP, DEVICE, REFERRERS / TRAFFIC SOURCES, FREQUENCY – NEW | RETURNING | LOYAL, TOP CONTRIBUTORS.

COMPONENTS:

ADSCRIPTS, LANDSCAPE CARD CAROUSEL, LIST VIEWS, TRENDING CAROUSELS, GRID VIEW, TYPE 1,2,3.
WEBSTORY, RHS/LHS LAYOUT, MEDIA LIST, WEBSTORY, ERROR PAGE, WEBSTORY LIST.

CONTENT CREATION FLOW

IMAGE DIMENSION, DATAMAPPING: STATIC | URL DRIVEN | ASSOCIATION || **MAPPING TYPES:** HIERARCHY | PARENTAL | PRIORITY

APIS USED:

1. Auto Save: MongoDB for Data Storage, A DRAFT PUT API CALL with some interval timer function was used.
2. Drag N Drop: Google (some HTML5 based Drag and Drop API)
3. Image, Video: Digital Asset Management (DAM) media delivery platform: offer APIs to manage the entire media lifecycle, from upload to optimized delivery on your website or app.
4. IMG RENDERING ISSUE IN SVG & JPEG FORMAT: Cloudinary – optimizes compression, resize/crop on the fly for responsive design AND **SVGO (SVG optimizer)**: A Node.js-based tool/API that removes redundant data from SVG files (minification)

CHALLENGES:

1. Understanding the Huge CMS, 100+ features around content management, SEO, publishing, admin control, no code web builder – I used to prepare a sheet of doubts and every morning ask it to my mentor on **how is the end-to-end workflow, why this feature exists, what problem it solves**
2. **At my first pitch, it was quite challenging to convince the product head to implement my features;** Based on feedback I was shaped to think like a senior PM. I still remember that meeting with the Product Head & CTO, that shaped my line of thought. Earlier I was just thinking about 10s of good features, but didn't give a thought to if this is required, what is its ROI, does this solution really solve a problem that really exists. I just rushed to cool features that sound great but in real life understanding why it is worth investing the time on it and aligning everything to the initial goal is how my approach has changed to now. After that, till the end of my Internships 10+ of the features adopted and half of them were implemented by me in the span of 3 months.

EXMYB

AI TECH:

User Query → Embedding Model → Vector Search (Similarity) → Ranking Model → Deck Recommendations

Embedding Layer — Converting Text into Meaning:

with **SBERT Model**: (Bidirectional Encoder Representations from Transformers)

Why these are good: 768-dimensional embeddings

Optimized for cosine similarity: Fast inference ($\approx 5\text{--}10$ ms per sentence on GPU)

Store each embedding vector (e.g., a list of 768 floats) in a **vector database**.

Do the same for:

- Deck summary
- Deck keywords (as secondary embeddings)
- combine them using weighted average:

`final_embedding = 0.7 * summary_embedding + 0.3 * keyword_embedding`

This ensures your deck's "meaning" is captured holistically.

LAYER 3: Vector Index (Similarity Search Engine)

FAISS (Facebook AI Similarity Search): Local, fast, easy for prototyping.

Pinecone / Weaviate: Managed vector databases, scale automatically, support metadata filtering.

Each deck vector is indexed along with metadata:

Hybrid Scoring Formula:

```
Final_Score =  
    0.6 * Semantic_Similarity  
+ 0.2 * Keyword_Overlap  
+ 0.1 * Industry_Match  
+ 0.1 * Recency
```

Semantic_Similarity = $\text{cosine}(\text{query_vector}, \text{deck_vector})$

Keyword_Overlap = Jaccard similarity between query terms & deck keywords

Industry_Match = binary 0/1 or weighted

Recency = normalized year value (more recent = higher)

convert every deck's text (summary + keywords) into a **vector representation**, i.e., a list of numbers that captures semantic meaning.

Similarly, the user's query ("improve supply chain efficiency for Tata Motors") is also turned into a vector.

Then — we find decks with the **closest vectors**.

AI PRD QUALITY RECOMMENDER?

- SMART: Specific, Measurable, Achievable, Relevant, Time Bounded

- Specific: **"Reduce loan approval time."** **"Make processes better."**
- **"Reduce loan approval time for SME customers."**, **"Improve loan process."**
- **In mobile app loan flow."**, **"Across all products."**

Step 1. Identify Candidate Sentences

Extract likely *goal* or *KPI* sentences.

Use section headers or keyword triggers like:

"goal", "objective", "KPI", "target", "we aim to", "we will"

Step 2. Feature Checks (Rule-Based Scoring)

Each check adds or removes specificity points.

Check	Logic	Score Impact
 Presence of numeric value	Regex for numbers, %, \$, or time units (<code>\\d+</code> , <code>%</code> , <code>days</code> , <code>weeks</code>)	+2
 Presence of user/entity term	Look for nouns like "user", "customer", "merchant", "borrower", etc.	+1
 Presence of product feature term	Look for product nouns: "app", "dashboard", "API", "loan flow"	+1
 Action-oriented verb	Detect verbs like "increase", "reduce", "launch", "build"	+1

-  **Ambiguous adjectives** Penalize words like “better”, “improve”, “good”, “enhance” -2
-  **Generic noun usage** Penalize phrases like “process”, “system”, “things”, “features” -1

Achievable

Attribute	Description	Example 	Example 
Feasible scope	The goal can be executed with current resources and tech.	“Reduce KYC time by 10% using OCR.”	“Automate 100% KYC verification within a week.”
Realistic metric	The improvement is meaningful yet plausible.	“Increase conversion by 15%.”	“Increase conversion by 300% in 1 month.”
Resource awareness	Acknowledges dependencies or team capabilities.	“Leverage existing payment APIs to scale refunds.”	“Completely rebuild payment stack in 2 weeks.”
Constraint alignment	Doesn’t break laws, compliance, or capacity.	“Offer loans under ₹50K for verified users.”	“Issue instant loans to unverified users.”

EXMYB INTERVIEW

PMs spend excessive time drafting, reviewing, and iterating PRDs. AI can automate this first layer.

AI Product Management Internship | Expand My Business Global | Hybrid: Gurgaon [Sep 24 – Dec 24]

Overview: *Delivered EMB dashboard to unify scattered client usage across call, email and project tracker, boosting engagement*

- Accelerated sales efficiency by **10%**, crafting a tailored EMB Case Deck **AI** recommender, eliminating irrelevant new queries
- Built **AI PRD** Evaluator raising first draft acceptance rate from **55% to 75%**, cutting rework by **35%** and boosting PM productivity
- Optimized user fragmented flow over Zoho, Excel and Calls by **60%** leveraging **API** integrations and user journey mapping

What is an EMB Dashboard?

- A tool to hook clients right before client acquisition to after service.
- A go to platform for every client needs to connect / communicate, track progress, request a service, invoice, view any insights for any of their projects with EMB. Eventually to boost engagement, reliability and build brand value and trust.

EMB Case Deck AI RECOMMENDER / AI Retrieval + Recommendation System

- THE GOAL WAS TO CREATE A DECK Recommender by taking user inputs on their Business Industry, company name / website and a 50–500 word Business Challenge definition. So our potential clients could relate that their business challenge is actually an existing project work experience of EMB leading to more trust & reliability that yes EMB has the capability to do this, eventually increasing Conversion Rates
- So How we did this is
- EMB HAD THEIR BUSINESS PROJECT DELIVERY CASE STUDY DECKS
 - THEN WE CREATED KEYWORDS RELATED TO DECK
 - And even allowed text inside decks to AI to scan.

Translated this into a north-star metric:

PRD First Pass Acceptance Rate

Rework Reduction %

Time-to-Review (TTR)

Challenges

- Data Collection > Generated Synthetic data specifically relevant to Angel One.

AARYASTAYS

Company Context: WHAT IS AARYA STAYS? (WOMEN FRIENDLY - BOHEMIAN INTERIOR FOCUSED HOMESTAY)

Situation:

Initially, when I joined...The Team had a very fragmented flow of managing their digital infrastructure.

1. **Different OTA channels not integrated:** If a homestay booking is coming on 1 OTA or even a call / offline, they have to update the availability on all; wherever their homestays were listed
2. **No Presence in Digital Marketing:** Relied on commission based OTAs, No Website of AaryaStays was there for organic growth and to improve trust among potential guests.
3. **3rd party online web check in app**, that stored the data of their guest and allow them the permission to web-check-in

Task: So Initially, (2 Month Intern) my responsibility as an Intern was to onboard a channel manager SAAS to eliminate the fragmented flow; i.e to update availability on each OTA. So typically what a CMS do is sync all the OTAs and their availability. Then I came up with a proposal that hey Sir, let's create a website; Created UI/UX (with a theme of bohemian & female oriented) of website; then after finalizing the flow; And ya this was a dynamic no code website. Then we hired 2 developer interns to build the Website; ya it was challenging to drive them and solve complexities. And the third digital product we built was a webcheck-in portal; which was a substitute of a 3rd Party SAAS which saved yearly subscriptions at a one time reasonable cost. So out of these 3 projects: 1,2,3..

Result: A Digital Infra was built; i.e On Website, Homestay Booking Engine connected to CMS to update bookings & Webcheckin data flow was flown to admin dashboard accessible through a export button in a CSV format!!

This was my Product 2nd Internship, where I actually learnt about building digital products and actually taking up the end-to-end ownership!! even drove the UX intern to create social media posts, onboarded a content writer, onboarded an interior designer.

Ya today I see the products I built I usually feel that few things there could have been ideated & executed better. But that's okay. We grow while learning. And Even I got a freelance project to work with Naturals Icecream (Marketing Head), and yes I executed it well. If you want I can tell what it was about. And yes last year Aarya Stays founder was our first client of our startup Unify Firms, we helped them to Upgrade Aarya Stays Admin Dashboard.

DIALOGUES:

- Aarya Stays, which is a women-friendly homestay chain, their digital setup was quite fragmented
- I'd say this was the internship where I truly learned end-to-end **product ownership** — right from problem discovery to design, tech coordination, and launch.
- And honestly, when I look back, I do feel there are things I could've done even better — but that's the part I really enjoy about product work. You learn while building.
- After that, we developed a custom **web check-in portal** to replace their third-party tool. It saved recurring subscription costs and gave them full control of their guest data.
- I led two developer interns to actually build it — which was my first real experience leading a small product team.
- This internship really taught me end-to-end product ownership — from problem discovery and design to development execution and stakeholder alignment.
- From an **entrepreneurship perspective**, what I learned here was the value of thinking in systems — not features. Every decision, from choosing the CMS to replacing SaaS with in-house builds, was about long-term scalability and ROI.

STRUCTURE: Work 1: Onboard A CMS, 2: Website, 3: Webcheckin Portal 4. Misc. Things

SOME DIALOGUES

GENERAL:

Deciding what to build is more difficult than building the product.

INTRO

Hey, My Name is Shritik Jaiswal. I have recently graduated from IIT Kharagpur with a B.tech Degree in Biotechnology & Masters in Entrepreneurship Engineering. I live in Mumbai.

My professional journey in PM started with participating in case study in general championship in my second year where I got the first exposure for solving real life business challenges with my seniors, the Case study led me to land an internship at a start-up at Aarya stays where I got the opportunity to fully own & build products from scratch. These two events sparked my interest in PM.

Post that I skilled up in PM by participating in competitions and pursuing a few internships in Product management at BSE, Times Internet and other firms and also I tried out an IT marketplace startup.

Coming to my college life, I got exposure to a lot of activities: where I participated in dance, dramatics, cricket, badminton GC & my hobbies are cooking & traveling. So ya, that was my short intro.

WHY FINTECH??

SLICE

Multiple Fintech Product – Rotational APM program – mix of experience on financial product will drive my product learning curve exponentially

Financial products inherently require strong thinking around user trust, behavior, and risk. At Slice, given the large user base and the emphasis on high ownership, I believe I would not only learn rapidly but also have the opportunity to create meaningful impact by working on real, high-stakes product problems.

FINTECH

I'm particularly interested in building fintech products because financial services affect almost every aspect of people's daily lives, yet many of these systems are still complex and inaccessible for a large segment of users due to traditional banking infrastructure.

In India especially, millions of young users and first-time earners are entering the financial ecosystem for the first time.

Building products that users rely on for their money management requires very thoughtful product decisions, and that's the kind of responsibility and impact I'm excited to work on.

MOST COMMON - 10X Prep

- **Tell Me About Yourself?**

Hey, My Name is Shritik Jaiswal. I have recently graduated from IIT Kharagpur. I live in Mumbai.

My professional journey into Product Management started since my 2nd year from participating in case study at GC, first time exposure to solve business challenges and interning at startups, participating in National Competitions to landing Product internships at big firms and eventually trying to build a startup.

During my college tenure I got a lot of exposure to Professional & Extra Curricular activities: like dance, nukkad, sports like cricket & badminton and the most important thing is how to build conversation with different types of people.

- **Strength**

1. UX & Design Sense (Childhood) & Product Sense (Came through 2.5 years of experience)
2. EMPATHY: I have seen phases of life: Poor, Lower Middle Class, Upper Middle Class - Why it's a strength: Bcz people who have seen only one side, would know how that user segment would react to the innovation that we built. But I have the experience of how different users would behave if we launched this feature.
3. I keep myself up to date through Product Hunt, PM School other linkedin communities
4. EXPERIENCE
5. Good in Informal communication, that helps me to build good relations. I know what to speak where & I think that's a strength bcz in my previous internships I have seen few people taking negatives. So either I am neutral for other or a good colleague of them

- **Weakness**

1. Detailing - I think I would need more data to come up with the best & accurate solution.
2. Communication - English
3. Communication Gap (Past) : Assumed the Technical team would get what I meant without communication because it's very obvious for me. But that's not the case

CV Specific

- Challenges
- Bad Exp
- Good Exp

UNIFLY FIRMS

We Started the idea of IT Market Plan with BCG Ideathon, then we took it as our Bachelor's project in Entrepreneurship Department, IIT KGP and saw growth then continued.

The Problem we addressed was around SME IT Marketplace to solve inefficiencies around

1. communication gap
2. trust
3. Quality of deliverables

For SMEs

We started to onboard Agencies and also acquired clients parallelly, by continuously conducting meetings we delivered around 8 projects generating 300k revenue, which were successfully delivered and quality was the best. I can say this bcz we got most of client through referrals. But as we were serving SMEs, and were starting though less budget projects, our efforts and the quality & professionalism we carried throughout was exceptional but we didn't see much value hence decided to take a step back. Ya I think if we continued, we may had more bigger clients today but I thought it's nothing novel we are just entering the crowd. Ya we differentiated but not as far to attract clients at fast pace and hence we decided to stop the operations.

But ended with a lifetime of practical aspects of building a startup, building relations, networking and also got hands-on experience on creating Webapp, ERPs, Dashboards, UI, and marketing side! And generating 45k profits.

Challenges:

- Building Trust on Clients & Agencies too
- Assuring the quality, that is not even in out control

Paytm

National 2nd Runner-Up | ProdQuest x Product Space | IIM Shillong [Mar 24 - Apr 24]

Overview: National 2nd Runner-Up among 4,000+ participants to revamp Paytm's clumsy Homepage and Transaction flow

- Revamped Paytm's homepage UI by resolving critical issues from 300+ user feedback, via design thinking and usability testing
- Applied RICE Framework to prioritize features, forecasting a 5% uplift in ARPU via AARRR funnel with 8% higher transactions

Situation & Task: The problem statement for Paytm was to enhance the UI user interface and user experience on the Paytm app yeah, so the first thing we went into his understanding, the Paytm uses that what is the major use case of Paytm app? the to use cases for first scan and pay second recharge and bill payments and third was the tickets & booking, ondc paytm mall

Action: Then we surveyed users to identify a few common problems regarding UI.
Problem

- 1: Clumsy Homepage & more cognitive load
- 2: Faced difficulty in scanning QR sometimes
- 3: Poor Transaction experience

After Identifying problems, we installed PhonePe, Gpay, etc and eventually observed paytm UI flow by flow to identify poor UI & flows

It was challenging & also interesting to identify that even a small UI change creates a big impact.

Then we brainstormed solutions and created high fidelity wireframes on figma, highlighting our insights and eventually drafting press release content & a funnel strategy.

Changes:

1. Search Bar
2. Grouped paytm feature icon on homepage to reduce cognitive load
3. Redefined the section flow
4. Highlighted top aspect : eg we put a moving QR at bottom mid, that looks like it is ready to scan
5. Increased visibility of torch & upload gallery in QR scanning page
6. Introduction of "Add note" feature on paytm
7. Increased size of payment successful tick mark, that comes after payment

RICE Prioritization

And then we analyzed the AARRR funnel

During this whole process, I learnt how understanding Behavioural UX makes a difference & how important is it for product managers to know about how small UI ideas creates huge impact in ux. Also, the competition enhanced my hands-on UI/UX skills and understanding user behaviour deeper.

Challenges:

- Observing the UI and identifying where the problem lies aligning to user feedbacks
- Thinking how to visually show our solutions in the most impactful way

ICC CASE GPT

CHATGPT

Phase	Objective
1. Continue with NVIDIA	Short-term stability for GPT Store
2. Invest in Startup R&D (Rain, Cerebras, G42)	Build long-term compute independence
3. Gradual Integration	Benchmark Rain NPUs with GPT-4/5 training
4. Transition to Hybrid Architecture	Mix NVIDIA + Rain hardware for scalability

Written: Proposed Rain AI acquisition strategy, cutting \$100K/day Nvidia chips costs, and built revenue model projecting \$25Mn+ ARR

Problem:

- ChatGPT has **> 99% free users**.
- Limited monetization options beyond GPT Plus (\$20/month)
- OpenAI currently spends **~\$100,000/day** on NVIDIA GPUs to run ChatGPT

Task:

1. Our team has to come with an acquisition strategy to onboard a chip manufacturer
2. Pitch a Revenue Model to increase monetization

Action:

We research various sources, and benchmarked some AI Chip Startups.

We identified a startup that is unique who manufacturer (**neuromorphic processing units (NPUs)**), it was RAIN AI. NPUs are chips inspired by the human brain promising **3 × energy efficiency** compared to GPUs. Ya it's computation ability is less, but if OPEN AI trains it it would be a game changer for Open AI.

You must be thinking why NVIDIA dominates? That's because of scale and software, not physics.

Even if Rain AI's **theoretical tech is superior**, *NVIDIA is winning because of three strategic moats* — not just hardware quality.

1 Software Ecosystem Lock-In

- NVIDIA's **CUDA**, **TensorRT**, and **cuDNN** toolkits are deeply embedded into PyTorch, TensorFlow, and nearly every AI training framework. Switching away from NVIDIA chips means **rewriting or re-optimizing AI codebases** : costly, slow, and risky. This "CUDA lock-in" gives NVIDIA a *near-monopoly similar to Windows in the 2000s*.

Manufacturing Scale & Reliability

- NVIDIA already has **mature partnerships with TSMC, Samsung**, and large-volume supply chains.
- Rain AI, by contrast, is in *prototype or low-yield* production.
- Startups rarely reach NVIDIA's level of manufacturing consistency and performance validation.

Proven Performance on Real Workloads

- ChatGPT, Google Gemini, Anthropic Claude — all trained on NVIDIA A100/H100 clusters.

This mirrors Apple's M-series chip strategy.

5. Phased Execution Strategy

Phase	Focus	Key Action	Timeline
Phase 1 (0–6M)	Strategic Acquisition	Acquire controlling stake (>\$50M investment)	Q2–Q3 2025
Phase 2 (6–12M)	Integration & Benchmarking	Test GPT-4/5 training on Rain NPUs	Q4 2025
Phase 3 (12–18M)	Hybrid Compute Model	Deploy mixed Rain-NVIDIA training clusters	Q2 2026
Phase 4 (18–24M)	Commercialization	Launch “OpenAI Compute Cloud” powered by Rain NPUs	Q4 2026

Just as **Apple broke Intel's dominance** with the M1 chip, OpenAI can **break NVIDIA's GPU monopoly** using Rain AI.

REVENUE MODEL:

What is the GPT Store?

The GPT Store is OpenAI's AI model marketplace a platform where anyone (developer, company, or individual) can:

- **Create** their own specialized GPT (custom version of ChatGPT)
- **Share or sell** it publicly, and
- **Earn** revenue when others use or subscribe to it.

2. Why the GPT Store Exists

The Problem:

- ChatGPT became a **massive user success (180M+ users)** — but **99% are free-tier**.
- Running these models costs **>\$100,000 per day** in GPU compute.
- OpenAI needed **recurring revenue** beyond \$20/month “Plus” subscriptions.

The Solution:

→ Build a **platform where others create value** — and OpenAI earns a share.

So instead of OpenAI alone making GPTs for everyone, it becomes:

An ecosystem where developers, companies, and creators build GPTs for every niche use case.

3. What GPT Store Offers

Feature	Description	Analogy
Custom GPT Builder	Anyone can “train” their own GPT by uploading data, setting tone, instructions, and behavior	App builder in App Store
Explore GPTs	Users can browse by category (education, productivity, coding, marketing, research, etc.)	App Store’s browse/discover section
Free & Paid GPTs	Developers can monetize their GPTs; users can try free versions	Freemium model like Spotify
Ratings & Reviews	Each GPT has public feedback and usage ratings	Trust layer like Google Play
Tiered Plans	Users choose between Free, Plus, GPTgo (all-access)	Like Netflix/Play Pass bundles

GPT Gauntlet	Monthly developer competitions for top-performing GPTs	Like Hackathons with revenue upside
---------------------	--	-------------------------------------

ICC CASE TRUCK

Designed digitization roadmap to acquire 10% of 85% unorganized truck drivers with OR led ops, boosting 20% app utilization

Problem Statement

- **Constraints:**
 - Fragmented market, high attrition (60%)
 - Low digital literacy among drivers
 - Unstructured allocation and idle truck hours
 - Safety issues of drivers
- **Objective:** Digitize and onboard unorganized truck drivers onto the platform.

Phase	Objective	Action Plan
Awareness & Education	Build trust and familiarity	Partnered with driver unions, petrol pumps, toll booths , and transport hubs to run campaigns in local languages. Promoted government tie-ins like <i>Skill India & FAME-II</i> .
Acquisition & Verification	Get drivers to install and register	Simple 4-step onboarding flow: ➡ Install via WhatsApp/QR poster ➡ Local language onboarding ➡ Aadhaar + License verification ➡ AI-assisted video KYC.
Activation & Retention	Keep them active on the app	Features designed for engagement: Rest/Work Mode toggle ✔ Break-time AI suggestions ✔ Transparent trip allocation (no bias) ✔ Instant payouts ✔ Loyalty scores & driver leaderboard.

●

NOBROKER

Conquered Gold in Case Study analyzing rental market gaps in PG, FinTech and Geographical areas for NoBroker

- Strategized geographical tenant city-switching retention model to capture 40% relocating tenants, achieving 20% greater CLV
- Surveyed 100+ PG Owners, Tenants to propose NoBroker PG, Fintech features leveraging MECE to boost ARR by INR 95.6Mn

NoBroker India's leading proptech platform

S - NoBroker CaseStudy was a great opportunity, where my interest in Product Management began. The Problem Statement was to increase low-rental market share & identify untapped opportunities in the rental ecosystem.

Action:

We started with brainstorming different business aspects of NoBroker.

Designed a User Survey form, and also every member conducted a few interviews.

We surveyed around 100 Owners and Tenants & conducted market research to identify 3 major problems:

1. **Inefficiency in property management:** Owners managing multiple rooms PG faced difficulty in organizing their properties and eventually update them online
2. **Delay in Payments:** also many owners reported that they don't get payment on time that led to various conflicts among a few, some find it hard to fill vacancies
3. **Relocation Frictions:** Tenants find it difficult to find good property initially during relocating after switching a job

Solutions

1. Property Management System,
2. Delay in Payments - **SNPL: Secure Now Pay Later** feature: Limit for 1 yr and CIBIL > 700
3. **City Switching Retention Strategy:** Implement Strategies like incentivising existing relocation customers to make a purchase in new location to capture **40% of relocating tenants**, improving CLV by **20%**.

Result:

- Won Gold at among all teams at IIT Kharagpur for the depth of market analysis and solution design.
- Our recommendations demonstrated measurable revenue and retention impact for NoBroker.
- This experience—working in a small war-room with 10 team members, brainstorming with future PMs/consultants—**sparked my interest in Product Management**

Challenges:

- Understanding the Users' needs & expectations, I am not familiar with!
- Working with limited data & doing Researching.
- Thinking how to present our solutions to NoBroker.

InsureTech

Event Captain | Product Management | General Championship Technology 2025, IIT KGP

Overview: Led and mentored a 20 member product team, securing 3rd place for Radhakrishnan Hall out of 15 competing teams

- Built one-stop InsuranceTech platform to compare, buy and manage policies enhancing user accessibility and decision making
- Projected user engagement boost by 25% and reduce policy discovery time by 30% by proposing 8 Features and GTM Strategy

SITUATIONAL QUESTION

PRODUCT Q

What do you define by a successful product as a PM

A successful product, for me as a PM, is one that genuinely solves a real user problem so much, so that they come back to it without being pushed. It creates clear value for the user while also driving meaningful business outcomes like retention, revenue, or growth. You know it's working when users not only use it repeatedly but also trust it and prefer it over alternatives. At the same time, it should be scalable, sustainable, and continuously improving based on feedback and data. In simple terms, a successful product is where user happiness and business impact grow together.

WHAT IS PRODUCT MANAGEMENT?

Product management, for me, is like being the person who understands a problem deeply by stepping into user shoes. For existing products you have to go back and question if the users are just ok with the product as they don't usually realize what they need, does the product solves the problem effectively?

& then decide solutions with available resources within constraints resonating with the firm's mission & vision I think PM is more about creatively deciding *what to build* rather than executing *and communicate the "whys" & "hows" behind the product with the team & align them with our vision.*

End of the day, if the product solves a real problem and people keep coming back, the impact motivates to get better.

WHY PRODUCT MANAGEMENT?

During my childhood / highschool. I used to imagine today's existing solutions before they existed. Eg: app like Quora, credit UPI, a blinkit model for my stationary shop at small scale. It happened to me many times that what I thought off is a business today.

One thing that was missing there was the question "how I will do that"? I just thought designer, software developer, core researcher, data analyst these are the only fields I can get a job in engineering.

But when I participated in case study comp in my 2nd yr, I realized this is something for me where I can bring my creativity to real life. Before that I tried Design, Web-D.. I realized that creativity in these fields are limited to project scope. But in PM I can be creative limitlessly and make things happen in real life to create impact.

WHY NOT SLIKK

EXPECTATIONS FROM CITIUS?

I'm expecting a similar fast-paced team where I will learn with the best in the APM program and solve meaningful healthcare problems where I can leverage my product skills, ui/ux design sense & diverse experience around B2B & B2C to create impactful solutions.

Recently, I have got hands-on experience on building products using AI Tools like cursor, claude. I have built an analytics dashboard & image processing pipeline for a fashion quick commerce within 1 month without tech-team support and this is a personal milestone for me, it feels good when I deliver something which was beyond my capability.

So, summarizing my expectations from Citius. I am looking for work impactful projects with high-ownership

I'm expecting a similarly fast-paced environment at CitiusTech where I can learn from strong peers in the APM program while solving meaningful healthcare problems at scale. I believe my product thinking, UI/UX design sense, and experience across both B2B and B2C domains can help me contribute to building impactful user-centric solutions.

Recently, I've gained hands-on experience building products using AI tools like Cursor and Claude. For example, I independently built an analytics dashboard and an image-processing pipeline for a fashion quick-commerce company within a month, without dedicated tech-team support. That experience was personally significant because it pushed me beyond my perceived capabilities and showed me how quickly ideas can be translated into real products with ownership and execution.

Overall, I'm looking for high-ownership, impactful projects where I can continuously learn, build, and create meaningful value through product innovation.

WHY X

WHY CARWALE:

1. What excites me about CarWale is their userbase cohort. Most people come on carwale with an intention to buy a car & In India, buying a car is one of the biggest financial and emotional decisions for a family. The journey can often feel confusing - users spend weeks researching models, comparing options, evaluating prices, and arranging financing before making a decision. I would love to solve this big friction and uncertainty users face throughout this process and help them move more confidently from discovery to purchase across the funnel.
2. I always wanted to work specifically on user-facing digital platforms, where every small product decision can impact millions of users and I think CarWale's digital focus on Apps and Webs with a huge user base would be a perfect place to create an impact at scale.
3. MUMBAI

WHY GOOD FIT?

1. I believe I'm a strong fit for CarWale because I have been interning only in product management roles since 3 years, which is very rare at my age that gives me an edge. Every internship was around building digital products and understanding user behavior, analyzing funnels, identifying drop-offs, and using data to improve user experiences and business outcomes with creativity - which is a similar thing Carwale would be expecting from me.
2. At CarWale, the journey is more complex as buying a car is a long and complex decision-making process, and users interact with multiple touchpoints before converting. I can bring a structured approach & first principles thinking to apply my practical learnings to increase conversions for carwale.
3. On top of that, naturally I have an exceptional design sense that always help my team to build great UI/UX products.

WHY RAISE:

1. What excites me about Raise is their userbase **Cohort**: Most people come on Dhan or Buzz AI to explore where to invest their hard earned money, with an expectation to grow them with confidence. Although, there is always uncertainty in markets but Raise is working to solve the research part and enable users what they need effectively using AI & great product vision and I would love to be a of the team and align with the mission to solve critical frictions users face in decision making.
2. Always wanted to work on AI products
3. Mumbai

WHY Citius:

Ya I think that the healthcare industry is one of the most complex industries because it combines regulation, large-scale unorganized data, operations and a highly sensitive industry that directly impacts people's life. I loved how citius is digitizing such a large un-organized data and transforming it into valuable insights that solves problems for hospitals, doctors & labs allowing them to focus on their core work enhancing patients outcomes. On top of that my background from Biotechnology + Entrepreneurship Engineering directly resonates strongly with Healthcare & Business needs.

Also, as Data is a MOAT for Citius and I have hands-on experience on building SAAS products & creating analytics dashboards & playing with data using AI Tools like Cursor Claude, I feel Citius would a great-fit for me.

WHY DBS

I have been following DBS since a while and I loved how DBS has transitioned from a Traditional Bank to a Fintech Company that does Banking with a digital-first approach.

Particularly, SME lending - is an exciting space for me that creates an opportunity for me to empower small businesses who are struggling with capital & unlock their potential and this opportunity of contribute & impact India's Growth is why I want to go with DBS.

In SME, I was already aware of alternate banking, & recently I have got to know about Ecosystem-led partnerships which seems more exciting as it enables us to operate at scale at once, so my interest at DBS has grown after deeply understanding the Job Description.
